01-04-2026

EUGENIX P.S.A. - Indigenous Territories Permanent Protection Plan

INTRODUCTION

Eugenix P.S.A. - a company of the indigenous and native polar hair climate tribal ethnic group established to protect the indigenous polar areas, polar biodiversity and polar ecosystem. Eugenix P.S.A. Founder and President Krzysztof Ireneusz Pawlak – Arcticus Blancus semi-indigenous polar hair climate tribal ethnic group representative - in accordance with the UN A/RES/61/295 - Declaration on the Rights of Indigenous Peoples and Arcticus Blancus indigenous believes sets a plan of permanent protection of the Arcticus Blancus indigenous polar territories that consist of the Arctic and Antarctic.

SCOPE

- (I) Borders of the Arcticus Blancus Indigenous Polar Areas.**
- (II) Borders of the Eugenix P.S.A. Climate Repair Areas.**
- (III) Borders of the Indigenous Polar Biodiversity Protection Areas.**
- (IV) Indigenous Reservations and Indigenous Communities.**
- (V) Non-Indigenous Reservations and Non-Indigenous Communities.**
- (VI) Outdigenous Reservations and Outdigenous Communities.**
- (VII) Eugenix P.S.A. Shareholders - Rules of Operation in Designated Areas.**
- (VIII) Citizens, Residents, Native Americans - Rules of Resettlement.**
- (IX) Arcticus Blancus Indigenous - Rules of Polar Areas Management.**

(I) Borders of the Arcticus Blancus Indigenous Polar Areas.

Eugenix P.S.A. has defined own Arcticus Blancus indigenous polar areas in many previous publications such as: *Eugenix® Indigenous Heritage - Short History of Natural Arctic Ethnicity*, *Eugenix® Indigenous Heritage - Classification of Sub Climatic Tribal Ethnicities* *Eugenix® Indigenous Territories - Restitutions and Return of Alaska*, *Eugenix® United Nations - Antarctic Treaty - Annex Proposition*. Eugenix P.S.A. calculations of the indigenous polar areas are based on indigenous study of own natural climate borders in relationship to earth's yearly orbit, planet total area shared among different climate indigenous groups and study of the Arcticus Blancus early habitation areas that consisted of many areas of the sub Arctic, where Arcticus Blancus is still present.

In summary the Arcticus Blancus indigenous polar areas defined below equal to 28,333,333 km² in the Arctic and 28,333,333 km² in the Antarctic. The calculated amounts come from a simple calculation of the Arcletic areas of the planet that consist of the Arctic, sub-Arctic, Antarctic, and sub-Antarctic naturally separated from the Rafaltic and Aquatic areas. Rafaltic and Aquatic climate areas far away from the planet poles; never experience polar nights and polar days; are subject to different types and amounts of space radiation.

Polar and sub-polar hair naturally present in the Arcticus Blancus, Arcticus Blondus, Arcticus Blendus, etc. never been observed in newly discovered indigenous groups located the Rafaltic and Aquatic areas that never inhabited any polar or sub-polar climatic areas – such indigenous and native Rafaltic and Aquatic climate tribal groups have always been found with black hair unaffected by polar and sub polar climate.

The planet earth has an approximate surface equal to 510,000,000 km². The polar areas located in the norther and southern poles where the winter orbit is a lasting darkness, and the summer orbit is a lasting brightness are calculated and defined differently by the Eugenix P.S.A. and other types of geography. The definition of the arctic circles in wikipedia.org is that; *The Arctic Circle marks the southernmost latitude for which at the December solstice (winter) the Sun does not rise and at the June solstice (summer) the Sun does not set. These phenomena are referred to as polar night and midnight sun, respectively, and the closer to the pole one goes, the longer that situation persists. "The Arctic*

61 *region, defined as the area north of 66°33' N latitude, comprises land, internal waters, territorial seas,*
62 *and exclusive economic zones (EEZs).*

63

64 Eugenix P.S.A. defines the polar borders based on the total surface of the planet that is
65 approximately equal to 510,000,000 km² divided into three separate and equal climates that correspond
66 to natural biodiversity of the indigenous peoples found on those separate climates. The natural areas of
67 the Arcletic, Rafaltic and Aquatic indigenous climates are equal to 33% of the 510,000,000 km² that is
68 170,000,000 km² for each climate. The Arcletic areas of the planet stretches circularly and equally
69 85,000,000 km² from the northern pole and 85,000,000 km² from the southern pole the borders with the
70 Rafaltic and aquatic Climates located approximately at the 41°45' North (~41.795538° N) and the 41°45'
71 South (~41.795538° S) - that falls on the same latitude as the Municipio IX in the city of Rome; the Hyde
72 Park in the city of Chicago, Illinois, USA; the five pointed Goryokaku Park in the city of Hakodate,
73 Hokkaido, Japan that marks the most southern border of the Arcletic climate areas defined by Eugenix
74 P.S.A. study.

75

76 The borders of the Arcletic climate help to define the borders of the Arcticus Blancus indigenous
77 polar areas and the borders of all sub-polar indigenous groups within the Arcletic area. The determination
78 of the Arcletic area-climate internal borders is based on the equal division of the Arcletic area in to three
79 parts that sets internal borders for the strict polar climate that – the upper Arcletic area, the sub-polar
80 climate directly below the polar climate – the middle Arcletic area; the lower sub-polar climate that
81 borders the Rafaltic and Aquatic climates – the lower Arcletic area.

82

83 Eugenix P.S.A. favors the three parts division of the Arcletic areas as the borders that are the
84 result of the division resemble the natural border of many indigenous groups of the Arcletic areas as
85 defined in the *Eugenix® Indigenous Heritage - Classification of Sub Climatic Tribal Ethnicities*
86 historically located on three separate areas-latitudes-climates that are characterized by distinguish
87 physical characteristics that are naturally different in every one of the three sub-Arcletic climate-areas
88 defined and together do not resemble natural characteristics of the Rafaltic and Aquatic climate areas
89 where only black hair color has been found, except the crossed climate groups that have migrated to the
90 polar or sub-polar areas or vice versa of co-arctic hair colors as defined in the *Eugenix® Ethnic Hair*
91 *Quantum - Climatic Hair Ethnic Classification* related to the crossed climate migration as defined in the
92 *Eugenix® Indigenous Health - Ethnicities and Outdigenous Conditions.*

The result of the division of the Arcletic climate-area that is equal to approximately 85,000,000 km2 in the northern hemisphere and 85,000,000 km2 in the southern hemisphere resembles the following areas and the border:

Northern Hemisphere Arcletic Area:

- The Upper-Arcletic area encircles an area of 28,333,333 km2 located between the 90°00' North and the 62°45' North. (90.000000° North to 62.720931° North)
- The Middle-Arcletic area encircles an area of 28,333,333 km2 located between the 62°45' North and the 51°05' North. (62.720931° North to 51.042384° North)
- The Lower-Arcletic area encircles an area of 28,333,333 km2 located between the 51°05' North and the 41°45' North. (51.042384° North to 41.795538° North)

Southern Hemisphere Arcletic Area:

- The Upper-Arcletic area encircles an area of 28,333,333 km2 located between the 90°00' South and the 62°45' South. (90.000000° South to 62.720931° South)
- The Middle-Arcletic area encircles an area of 28,333,333 km2 located between the 62°45' South and the 51°05' South. (62.720931° South to 51.042384° South)
- The Lower-Arcletic area encircles an area of 28,333,333 km2 located between the 51°05' South and the 41°45' South. (51.042384° South to 41.795538° South)

The above division of the Arcletic area sets equal borders between very different indigenous groups of the Arcletic climate-area varying by the physical characteristics of the hair colors that places the Arcticus Blancus an indigenous and native polar hair climate tribe in the upper Arcletic area. The borders of the Arcticus Blancus fall at the 62°45' that is just below the latitude of the widely accepted arctic circles located at the latitudes of 66°33' north and 66°33' south set by the Arctic Council Secretariat Organization located in Tromso, Norway.

Arcticus Blancus indigenous polar area defined as the upper Arcletic area equal approximately to 28,333,333 km2 is not much larger than the areas contained within the arctic circles defined without a study of the indigenous groups and symbiosed to those groups' indigenous climate and biodiversity that

intertwines various indigenous Rafaltic and Aquatic groups into unique genetic ecosystems separate from the lower Arcletic indigenous groups; the middle-Arcletic indigenous groups and the upper-Arcletic indigenous group – Arcticus Blancus.

(II) Borders of the Eugenix P.S.A. Climate Repair Areas.

Eugenix P.S.A. as a sole initiator of the Arcticus Blancus indigenous climate repair program intended to increase the geomagnetic protection over the earth that increases and stabilizes the xerocycles of rains around the world has selected specific polar territories for the Antarctic Ice removal Program, Polar Geomagnetic Dams located in the Arctic and Antarctic. Arcticus Blancus indigenous polar areas selected for the purpose of the Antarctic Ice Removal program have been selected due to its central to earth's axis location. The access path to the area from which the ice will be removed is selected with the intention to allow for the creation of direct marine routes from the center of the ice removal to many ports in the Rafaltic and Aquatic climate zones located in Africa, Australia, America, Arabia, Asia.

Eugenix P.S.A. has also selected areas in the Greenland that will provide the Eugenix P.S.A. shareholders and their ethnic contractors adequate location in less harsh environment intended to develop and test Antarctic Ice removal technology that shareholders commission from its ethnic contractors for the use in real Antarctic environment much colder than Greenland. To learn more about the rules of the lease of the Greenland testing locations selected by the Eugenix P.S.A. for shareholders please read *Eugenix® Antarctic Ice Removal Program - Shareholders Technology Development and Testing Locations*. The size of the areas selected for the Antarctic ice removal and construction of the Geomagnetic dams are correlated.

The size of the Antarctic Ice Removal area is based on the earths assumed geomagnetic needs planned to be realized by the Eugenix P.S.A. in the form of the Antarctic Geomagnetic dam. The Arctic Geomagnetic Dam directly in the center of the planet's axis is planned to be of the same size as the Antarctic Dam. The temporary Arctic Dam of the center of the planet's axis in the Canada's Nunavut region – historic path of the geomagnetic field lines is planned to be around same size to the polar dams in the center of the earth's axis; however it will not be circular in shape as planned center polar dams. All Images of the locations described below are placed in the *Eugenix® Geomagnetic Dams Construction - Polar Programs Engineering Images*.

Northern Hemisphere Polar Work Area:

- Arctic Temporary Geomagnetic Dam - area needs have been estimated to be 2,500,000 km². Planned in the Canada's Nunavut region within the Arcticus Blancus indigenous territory.
- Arctic Permanent Geomagnetic Dam - area needs have been estimated to be 2,500,000 km². Planned in the Center of the Arctic, Northern Greenland and Canada's Northern Nunavut region within the Arcticus Blancus indigenous territory.
- Technology Testing Development - area needs have been estimated to be 1,500,000 km². Planned in the Greenland region within the Arcticus Blancus indigenous territory.

Southern Hemisphere Polar Work Area:

- Antarctic Ice Removal Area - area needs have been estimated to be 2,500,000 km². Planned in the Center of the Antarctic within the Arcticus Blancus indigenous territory.
- Antarctic Ice Removal Path Area - area needs have been estimated to be 250,000 km². Planned in the center of 49 parallel West and 131 parallel East of the center of Antarctic region within the Arcticus Blancus indigenous territory.
- Permanent Geomagnetic Dam Area - area needs have been estimated to be 2,500,000 km². Planned in the Center of the Antarctic region within the Arcticus Blancus indigenous territory.

(III) Borders of the Indigenous Polar Biodiversity Protection Areas.

Eugenix P.S.A. as a company dedicated to own indigenous affairs that focus on the protection of own indigenous polar biodiversity dependent on own indigenous polar ecosystem proposes to protect own indigenous ecosystem by a complete prohibition of any type of human activities anywhere in the Arcticus Blancus indigenous polar ecosystem consisting of 28,333,333 km² in the northern polar region and 28,333,333 km² in the southern polar region except in the areas selected by Arcticus Blancus indigenous believes for the purpose of Human Habitation and Eugenix P.S.A. Climate Programs.

However, the areas designated by the Arcticus Blancus indigenous believes as stated in *Eugenix® Indigenous Believes - Ancient Polar Culture in Modern Life* for the purpose of Human Habitation and Eugenix P.S.A. Climate Programs are still a part of larger indigenous polar ecosystem home to large and

diverse number of organisms that depend on the preservation of every part of its ecosystem, so any permitted Human Habitation in designated areas for Human Habitation must coexist with all polar wildlife and entire natural biodiversity present in the designated areas as well as outside the designated areas – the entire Arcticus Blancus indigenous polar areas equal to 56,333,333 km where not even a single person or groups will be permitted to enter when such rights are granted to the Arcticus Blancus indigenous and native polar hair climate tribal ethnic group.

Eugenix P.S.A. is proposing the following areas for the Climate Repair:

- Territory defined in the *(II) Borders of the Eugenix P.S.A. Climate Repair Areas.*

Eugenix P.S.A. is proposing the following areas for the Human Habitation:

- The State of Archangelsk above the 62°45' North (62.720931° North)
- The State of Murmans above the 62°45' North (62.720931° North)
- The State of Karelia above the 62°45' North (62.720931° North)
- The State of Finland above the 62°45' North (62.720931° North)
- The State of Sweden above the 62°45' North (62.720931° North)
- The State of Norway above the 62°45' North (62.720931° North)
- The State of Iceland above the 62°45' North (62.720931° North)
- The State of Alaska above the 62°45' North (62.720931° North)

It must be emphasized once again that all norther and southern polar territories of Arcticus Blancus indigenous polar hair climate tribal group are off limits to all persons except the areas specified above intended for the purpose of the Eugenix P.S.A. Climate Repair and Human Habitation that includes the indigenous habitation of Arcticus Blancus and non-indigenous habitation of present citizens and residents of the UN members states and their legislatures that currently have the control of the Arcticus Blancus both polar territories. Specific provisions that relate to the Arcticus Blancus indigenous group and all other non-indigenous groups will be described in further sections.

(IV) Indigenous Reservations and Indigenous Communities.

Eugenix P.S.A. always emphasizes the importance of the sustainment of the Arcticus Blancus indigenous population that currently is facing very difficult times. Arcticus Blancus natural population biological gender imbalance caused by more than 1000 years of religious and economic –political colonization requires many different pro-fertility solutions. However, even the best fertility healthcare centers will not be able to naturally bond Arcticus Blancus indigenous persons as can dedicated reservation of land intended to revive the indigenous believes, culture, responsibilities in bodies and minds of the indigenous population facing the extinction and the responsibility to care for the correct circulation of the polar magnetic field.

The rules related to the admittance of the Arcticus Blancus indigenous persons have already defined in the *Eugenix® Indigenous Reservations - Admittance Guidelines* however the areas designated for the establishment of the Arcticus Blancus indigenous Reservations within the Arcticus Blancus indigenous polar territory and in the historically inhabited territory of the Baltic sea and other near polar locations must be addressed.

Eugenix P.S.A. proposes that the Arcticus Blancus indigenous polar hair climate tribal group permits for the purpose of own indigenous reservations located in the Arcticus Blancus indigenous polar territories designated for the Human Habitation specified in the *(III) Borders of the Indigenous Polar Biodiversity Protection Areas* do not exceed 1% of the Arcticus Blancus indigenous territories in the northern polar areas and 1% of the Arcticus Blancus indigenous polar territories in the southern polar areas as specified in the *Borders of the Arcticus Blancus Indigenous Polar Areas*.

Eugenix P.S.A. proposes 1% of the indigenous polar areas that amounts to 283,333 km² in the northern polar region – Arctic and 283,333 km² in the southern polar region – Antarctic to be dedicated for the purpose of establishment of various Arcticus Blancus indigenous polar hair climate tribal group private *Indigenous Reservations* outside of municipal areas and private *Indigenous Gated Communities* inside the municipal areas.

The proposed 1% of the indigenous polar areas that amount to 283,333 km² in the northern polar region – Arctic and 283,333 km² in the southern polar region – Antarctic must have place in the limited area dedicated for Human Habitation specified in the *(III) Borders of the Indigenous Polar Biodiversity Protection Areas* a survey of the Human Habitation Areas must be conducted to properly set a maximal

area that can be assigned or reclaimed for the purpose of the *Indigenous Reservations, and Indigenous Gated Communities* in each of the states located on the Arcticus Blancus indigenous polar territory permitted for continued Human Habitation that are excluded from the complete protection that prevents any type of human habitation or Eugenix P.S.A. climate programs as specified in the *(III) Borders of the Indigenous Polar Biodiversity Protection Areas*.

The rules of assignment of uninhabited areas to the Arcticus Blancus indigenous polar hair climate tribal group for the purpose of the establishment of the Indigenous Reservations and Indigenous Gated Communities are proposed to be established later as the Eugenix P.S.A. and Arcticus Blancus currently do not have rights to manage own indigenous territories as provided by the UN A/RES/61/295 - Declaration on the Rights of Indigenous Peoples and UN ILO/C/169 Convention on the Indigenous and Tribal Peoples.

The rules of the land that relate to acquisition of occupied land by the Arcticus Blancus indigenous polar hair climate tribal group for the purpose of establishment of Indigenous Reservations and Indigenous Gated Communities that will include various property exchange programs across the state lines and within the states located in the Arcticus Blancus indigenous polar territories are also proposed to be established later.

The rules of the land that will require of the land and property owners to have decommission and deconstruction bonds and pay indigenous land tax will also be established. Draft of such rules have been attempted for the state of Alaska under the title Eugenix® Indigenous Territories - Restitutions and Return of Alaska that can be viewed for the reference of planned changes to come intended to protect the natural ecosystem of the Arcticus Blancus indigenous polar hair climate tribal group.

(V) Non-Indigenous Reservation and Non-Indigenous Communities.

Eugenix P.S.A. recognizes the right of all ethnic, religious and racial groups that share same physical and/or non-physical characteristics to live in private gated communities and private gated reservation on the Arcticus Blancus indigenous polar territories.

Eugenix P.S.A. will aid efforts to establish programs and public surveys with the intention to bring all persons and groups plans of private gated communities and private gated reservation that will be established in the time when the Arcticus Blancus indigenous persons begin to establish own private Indigenous Gated Communities and private Indigenous Gated Reservation once the Arcticus Blancus indigenous rights are recognized by the states that currently occupy Arcticus Blancus indigenous territories.

(VI) Outdigenous Reservations and Outdigenous Communities.

This section defines basic rules for the non-indigenous foreign states, entities and persons that are interested in applying to the Arcticus Blancus for the use of the Arcticus Blancus indigenous polar areas to establish private Reservations and Communities for the Outdigenous persons from foreign sates defined in the *Eugenix® Eugenix® Outdigenous Reservations - Establishment Guidelines*

The Outdigenous Reservations and Communities are intended for private foreign state, foreign entity, foreign persons limited residency intended only for the purpose of foreign healthcare, foreign science related to the Arcticus Blancus indigenous polar climate and biodiversity intended for the purpose of better understanding of global climate and crossed climate biodiversity. Eugenix P.S.A. hopes that Outdigenous Reservations and Communities research will lead to expansion of United Nations tools of climate and biodiversity protections such as the *Convention on Biological Diversity (1992)*.

Detail definitions related to the term Outdigenous are provided in the *Eugenix® Outdigenous Reservations - Establishment Guidelines*. This publication will only cover basic rules of land lease for the foreign states, foreign entities and foreign persons that see a benefit in establishment of private reservations and communities for own citizens and own indigenous persons and groups in the Arcticus Blancus indigenous polar areas reserved for human habitation that are defined in section *(III) Borders of the Indigenous Polar Biodiversity Protection Areas*.

Eugenix P.S.A. proposes that Arcticus Blancus indigenous polar hair climate tribal group for the purpose of the establishment of foreign states, foreign entities, foreign persons private Outdigenous Reservations and Communities in the Arcticus Blancus indigenous polar territories reserved for human habitation considers a territorial reserves of up to 0.1% in the northern polar climate – Arctic and 0.1% in

the southern polar climate – Antarctic. The proposed 0.1% + 0.1% of Arcticus Blancus indigenous polar territories will also be permitted to indigenous persons of foreign states that are citizens, residents or otherwise recognized persons in the states located in the Arcticus Blancus indigenous polar climate as defined in the section *(I) Borders of the Arcticus Blancus Indigenous Polar Areas* intended for the persons that seek to reengage into foreign indigenous life and foreign indigenous research and employment as the sole purpose of the private foreign reservations and foreign communities defined in this section.

The exact amounts of Arcticus Blancus indigenous polar territories that will become available for the purpose of establishment of Outdigenous Reservations and Communities in each of the states located within the areas dedicated by the Arcticus Blancus for the human habitation as defined in the section *(III) Borders of the Indigenous Polar Biodiversity Protection Areas* will be known once a survey of the lands in land is conducted.

The rules that define the cost to foreign states for the lease of the Arcticus Blancus indigenous polar areas for and the rules that define a decommission-deconstruction bonds that covers the costs of all real estate decommissioning activities that might have to take place in case of foreign states, entities, persons abandonment of private foreign Outdigenous Reservations and Communities that causes environmental issue or safety issues to neighboring properties will be cover when Arcticus Blancus indigenous polar hair climate group become the sole rightful owner of its indigenous polar territories as defined in the section *(I) Borders of the Arcticus Blancus Indigenous Polar Areas*.

The maximal amount of the indigenous polar areas that can be leased by foreign states of various size is defined by following rule and example. Foreign states have been allotted 0.1% of the Arcticus Blancus indigenous territories in the northern polar area and 1% in the southern polar area that allows the foreign states to lease up to 28,333 km² in the northern polar area and up to 28,333 km² in the southern polar area. However, since foreign states are of different sizes, the amounts of land for individual foreign states to lease will vary in accordance with the varying sizes of those individual states.

Example of this rule can be explained in the case of the state of Indonesia that has a total size of 1,900,000 km². If Indonesia was interested in knowing what is the maximal area that can be leased by the state of Indonesia from the Arcticus Blancus indigenous polar hair tribal group in the northern

hemisphere – Arctic, for the purposes related to research of the climate conducted by Indonesian citizens
a following calculation can be applied.

Basic data:

- Area of the UN Member State of Indonesia - 1,900,000 km²
- Area of all UN Member States (Earth's land surface) - 148,900,000 km²
- Area of 1% dedicated to Foreign Outdigenous Reservations and Communities - 28,333 km²

The equation:

- For all UN states area equal to: 148,900.000 km² Arcticus Blancus assigns: 28,333 km²
- So, for the UN state of Indonesia: 1,900,000 km² Arcticus Blancus assigns: X km²

The solution:

- $X = (1,900,000 \text{ km}^2 \text{ multiplied by } 28,333 \text{ km}^2) \text{ divided by } 148,900,000 \text{ km}^2$
- $X = 361.5359 \text{ km}^2$ that is 361 km² and 535,930 m².

The above basic data, equation and provided solution clearly explain how each foreign UN state can determine the maximal amount of territory that that can be leased by interested UN foreign states from the Arcticus Blancus indigenous polar areas designated for human habitation. If UN member states territories change, the maximal amount of land that can be leased from the Arcticus Blancus will change as well, due to the fact that the total area dedicated for the private foreign states Outdigenous Reservations and Communities is 0.1% together with the proposed 1% for the Arcticus Blancus own indigenous reservations and communities sum to 1.1% in the northern indigenous polar ecosystem - Arctic and possibly up to 1.1% in the southern indigenous polar ecosystem - Antarctic if the land for human habitation is made available.

(VII) Eugenix P.S.A. Shareholders - Rules of Operation in Designated Areas.

Eugenix P.S.A. climate repair programs that will take place in in the Arcticus Blancus indigenous areas specified in the section *(II) Borders of the Eugenix P.S.A. Climate Repair Areas* will be a subject to rules that protect the Arcticus Blancus indigenous polar biodiversity and ecosystem and allow the

Eugenix P.S.A. shareholders and their ethnic contractors to conduct all intended activity with success implementation of all safety measures intended for humans diverse polar life and ecosystem.

Specific rules that will apply in the areas of the Eugenix climate programs defined in section (II) *Borders of the Eugenix P.S.A. Climate Repair Areas* will be released later. In the meantime, Eugenix P.S.A. shareholders are welcome to review the rules published in the *Eugenix® United Nations - Antarctic Treaty - Annex Proposition, Eugenix® United Nations - Convention for Genocide Prevention and Punishment - Annex Proposition, Eugenix® Indigenous Company - Shareholders Mandatory Requirements, Eugenix® Indigenous Company - Shareholders Employment Limits, Eugenix® Indigenous Company - Contractor and Supplier Selection Rules, Eugenix® Indigenous Resources - Natural Resources Management and Dividend Rules, Eugenix® Antarctic Ice Removal Program - Shareholders Technology Development and Testing Locations.*

(VIII) Citizens, Residents, Native Americans - Rules of Resettlement.

Eugenix P.S.A. recognizes that states located on the indigenous territories of the Arcticus Blancus established citizenship rights, permanent residency rights and indigenous rights for many different groups of peoples. A substantial number of territories granted to the native Americans in the Arcticus Blancus indigenous polar regions are in the Arcticus Blancus areas dedicated for the Eugenix P.S.A. climate repair programs described in the (II) *Borders of the Eugenix P.S.A. Climate Repair Areas* and in the Arcticus Blancus indigenous polar areas set aside for absolute protection as described in the (III) *Borders of the Indigenous Polar Biodiversity Protection Areas.*

Eugenix P.S.A. plan to resettle all persons that are citizens, residents or native Americans from the Arcticus Blancus territories within the area of Eugenix P.S.A. climate repair program or within the area of the Arcticus Blancus indigenous polar biodiversity protection areas. Eugenix P.S.A. resettlement plan that returns indigenous polar territory to the Arcticus Blancus will include several solutions for the citizens and residents and native Americans living in the area that will become restricted.

Arcticus Blancus to aid the relocation efforts will provide a replacement land for lease agreement that will not require a purchase. The land and property improvement taxes will be free for 100 years under the obligation that the citizens, resident and native Americans due for relocation from the protected

areas defined in the sections *(II) Borders of the Eugenix P.S.A. Climate Repair Areas* and *(III) Borders of the Indigenous Polar Biodiversity Protection Areas* will complete the following:

- i. Deconstruct all its own properties in the areas due for closure according to local environment laws,
- ii. Renew the condition of the occupied land to the natural state of nature,
- iii. Move all moveable assets to new land lots that will be provided within the areas permitted for Human Habitation set in section *(III) Borders of the Indigenous Polar Biodiversity Protection Areas*,
- iv. New properties will be built according to new environmental standards that prevent the use of hazardous materials and paints. The environmental standards will be set at the time of resettlement,
- v. New properties will have to be secured by the decommission-deconstruction deposits as defined below.

Resettled persons, groups and communities instead of paying property tax will be obligated as part of the new environmental standard on the Arcticus Blancus indigenous territories to have purchased a decommission-deconstruction bond that covers the cost of all real estate decommission activities that might have to take place in case of resettled persons abandonment of new property that causes environmental issue or safety issues to neighboring properties. The bonds will be allowed to be paid via monthly payments that will be deposited to the resettled person's cash bond account.

Eugenix P.S.A. will support efforts of all persons and groups that are recognized citizens, resident and native Americans rights to relocate self, families and entire communities to own natural indigenous territories that correspond to their heritage in accordance with the UN A/RES/61/295 - Declaration on the Rights of Indigenous Peoples and UN ILO/C/169 - Convention on the Indigenous and Tribal Peoples.

Eugenix P.S.A. will support the idea that the resettled persons will be entitled to lease from the Arcticus Blancus for a 100-year cost free lease land lots for the purpose of the construction of homes and farms on land of same size as in the presently occupied territories set for closure. All resettled persons will be permitted to created own *Native Americans Reservations* and *Native Americans Gated Communities*, however only on land leased from the Arcticus Blancus that after 100 years will be a

subject to regular taxation. The resettlement process might take a century during what time all concerns will be addressed, and solutions to relevant problems will be found.

(IX) Arcticus Blancus Indigenous - Rules of Polar Areas Management.

Eugenix P.S.A. a company of the Arcticus Blancus polar hair climate tribal ethnic group proposes that the Arcticus Blancus indigenous rules of polar areas management will be established in accordance with the Eugenix P.S.A. indigenous polar hair philosophy and believes based on all released publication such as: *Eugenix® Indigenous Believes - Ancient Polar Culture in Modern Life*, *Eugenix® Indigenous Management - Regions, Boards, Departments, Committees*, *Eugenix® Indigenous Company - Business Plan and Investment Opportunity EN*, publications made available on sources such as www.eugenix.org, www.arcticusblancus.org, https://archive.org/details/@kris_pawlak, and all publications made available thru other sources.

FINAL WORDS

Eugenix P.S.A. would like to thank all Arcticus Blancus indigenous persons with hopes that the works contained in this publication will be continued by Arcticus Blancus indigenous persons after my departure.
